

Aluminum Conductor Steel Reinforced/ACSR Conductor/Bare Conductor

ACSR,AAC,AAAC,ASCSR&ACAR conductor widely used in power transmission lines with various voltage levels. since they have such good characteristics as simple structure, convenient installation and maintenance, low cost for the line, large transmission capacity and are also suitable for laying across rivers and valleys where special geographical features exist.

1. Specification:

- (1) all aluminium conductor (AAC)
- (2) all aluminium alloy conductor(AAAC)
- (3) aluminum conductor steel reinforced (ACSR)
- (4) anti-corrosion type ACSR
- (5) aluminium conductor aluminium clad steel reinforced(ACSR/AW)
- (6)rear earth aluminium conductor steel reinforced(ACSR/RE)
- (7)aluminium conductor aluminium alloy reinforced(ACAR)
